## **DETAILED ACTION**

### ***Information Disclosure Statement***

1. The references cited in the Information Disclosure Statement filed on 3 March 2005 have been considered.

### ***Election/Restrictions***

2. Applicant's election without traverse of claims 1-9 and 12-20 in the reply filed on 23 February 2007 is acknowledged.
3. Claims 10, 11, 21 and 22 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected inventions, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 23 February 2007.

### ***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 2874

5. Claims 1 and 12 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent Application Publication No. 2003/0108273 to Kowalczyk et al.

Referring to claims 1 and 12, the Kowalczyk et al. reference discloses all the claimed limitation of the method. The Kowalczyk et al. reference discloses a method and device for producing a transition between a first element (1010) having a first refractive index difference ( $\Delta n$ ) and a second element (1040,1140) having a second index difference  $\Delta n$  higher than the of the first element, comprising the steps of: controlling the  $\Delta n$  along a length of electro-optic polymer (1010) to achieve a gradual transition from a low  $\Delta n$  to a high  $\Delta n$  along the length; and optically coupling the length of electro-optic polymer between the first element and the second element. See Fig. 10 and Fig. 11 along with its respective portion of the specification. The  $\Delta n$  gradually increases when voltage is applied the  $\Delta n$  increases as the light transitions from the first element (1010) into the second element (1040,1140), where the  $\Delta n$  is relative to the refractive index of the first element  $\Delta n$ .

***Allowable Subject Matter***

6. Claims 2-9 and 13-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
